

The Tracks Gear Advantage

Security

Know exactly where your fleet is located - in real time, any time.

Ensure the security of your company's greatest assets – your drivers and your fleet - with internet based, real time wireless technology;

Location - showing you where your vehicles are in real time or by journey history, including stops.

Geofencing - automatically sends notification if vehicles move beyond a predetermined area

Duty of Care – ensure the safety of your drivers with driver ID, panic alarms, door lock and unlock, engine immobilization and impact detection using telematics

Reporting

Use your internet connection to check how your business is operating from anywhere in the world.

Use the reporting function to assist with route management, vehicle performance and maximise fuel efficiency.

Run reports of driver log on times to monitor fatigue and overtime costs and schedule reports to be emailed to you showing;

- Speed
- Idle time and billable hours
- Driver and vehicle activity
- Accident reporting
- Route monitoring and management – shortest, fastest for fuel efficiency
- Telemetry reporting – temperature, weight, vehicle maintenance
- Driver log on and off/fatigue and overtime management
- Driving Hours
- Mileage
- Unauthorised event reporting

Communication

Improve communication to run a more efficient operation

Messaging - no more missed calls, 'phone tag and expensive mobile phone charges. Send messages directly to your fleet and receive confirmation of receipt.

Voice - dial individual vehicles for voice communication.

Tailored Digital Forms - banish excess paperwork and tailor digital forms to your company requirements - check lists, assignments, delivery status, safety notices and more.

Add-Ons - Plug in PDA's and bar code scanners and choose touch screen capability and credit card validation options to ensure the on-the-road efficiency of your fleet.

The Tracks Gear Advantage

Customer Satisfaction

Real time tracking and communication with your fleet enables pro-active warning of unforeseen delays and instant location of goods for customers

Immediate Response - to any change in circumstance and to revised client requirements and priorities with accurate information on location and capabilities.

Location - with a bar-code scanning option, locate goods quickly and easily via the internet to communicate delivery details to your customers.

Avoid unforeseen delays - avoid traffic hold-ups with driver communication to ensure goods arrive on time and your customer knows quickly if there are unavoidable delivery delays.

Proven Capability

More than 100,000 units operate WebTech Wireless Technology across 50 countries

A reliable system that is used worldwide, ensuring the latest in proven technology across your fleet.

Research & Development

To meet emerging and as yet unknown requirements – operational, governance, legislative

With our partner WebTech Wireless and technology partners including Microsoft, IBM and Motorola, we are at the forefront of emerging and proven technologies capable of adapting to your requirements as you and the industry evolve – trialled and tested before market introduction.

About Tracksgear

An Australian owned and operated company, Tracks Gear is committed to offering a quality tracking product with an emphasis on customer service to help you take advantage of all the benefits today's technology can offer.

Striving to be more than a supplier, we form a partnership with our clients, providing specific operational and management support within our area of expertise – customised as required.

Supplying hardware, installation, flexible reporting and follow-up support, Tracks Gear is your one-stop shop for wireless tracking systems to ensure you have complete control over your fleet operations.
